## YOUNG EXPERTS DENTAL PROGRAM

25th January (20:00 - 21:30 LT Time)  
24th February (19:00 - 20:30 LT Time)  
15th March (22:00 - 23:30 LT Time)  
31st March (20:00 - 21:30 LT Time)  
12th May (20:00 - 21:30 LT Time)

All-year-round event, online & onsite, exciting topics! The event series for young dentists with innovative lectures, workshops and tips from the experts. Here you can find all Interdentale events, which are currently scheduled.

Registration is free: <https://www.dmg-dental.com/en/education/interdentale/>

**25th January 2022** (20:00 - 21:30 Lithuanian Time)  
Topic: „**DO DENTISTS NEED A FIRMWARE UPDATE?**“  
Speaker: **Dr. med. dent. Alexandros Manolakis**,  
talking LIVE with **Dr. Susanne Effenberger**

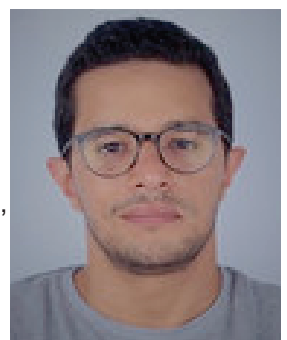

**Description:** Dentistry combines medicine, mechanics and esthetics in a unique manner. The interrelationships between the three disciplines make integration of digital workflows in dentistry a challenge. This integration though has enormous potential to ease our every day life at work. Digital workflow facilitates accurate, quick and cost-effective treatment planning. This plan can subsequently be implemented precisely using surgical-guides for implant placement and CAD/CAM technology in prosthodontic treatment.

The advantages are numerous:

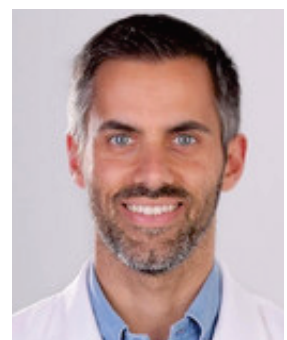

- improved communication between dentists, lab technicians and patients
- improved accuracy of all treatment steps and thus
- increased predictability of the whole treatment
- decreased stress for all team members
- happy patients

**24th February 2022** (19:00 - 20:30 Lithuanian Time)  
Topic: „**TAKE A DEEPER LOOK (INTO LESIONS).**“  
Speaker: **Dr. Omar Marouane**, talking LIVE with **Dr. Susanne Effenberger**

**Description:** Minimal-invasive treatment outcomes of aesthetically challenged anterior teeth are often difficult to predict, due to the heterogeneity of the lesion origin. What are chances and pitfalls during the planning process? Recently, new techniques and diagnostic tools have been investigated and published, that are keystone in treatment planning. The techniques help to investigate the micromorphological structure of the lesion and are a useful tool for choosing the appropriate treatment regimen. Together with Dr. Susanne Effenberger, Dr. Omar Marouane will discuss the most recent data and clinical experiences and will point out their benefits and challenges.

**15th March 2022** (22:00 - 23:30 Lithuanian Time)  
Topic: „**ASPECTOS IMPORTANTES NAS PREPARAÇÕES DENTÁRIAS VERTICAIS**“  
Speaker: **Dr. Tiago Silva**

**Description:** As preparações dentárias para restaurações protéticas fixas podem ser executadas de formas diferentes. São elas de dois tipos: preparação com margem definida e a preparação sem margem definida ou a chamada preparação vertical. Esta última foi originalmente usada para próteses fixas em dentes tratados com cirurgia ressectiva na doença periodontal. A técnica protética para dentes periodontalmente saudáveis usando o preparo vertical em uma abordagem sem retalho, tanto na zona estética quanto na região posterior com restaurações de cerâmica com ou sem sub-estrutura, tem alcançado resultados clínicos e estéticos de alta qualidade em termos de estabilidade de tecidos moles na interface protética/tecido, tanto a curto quanto a longo prazo. Para isso, a reabilitação de dentes utilizando a preparação vertical é necessário ter em consideração alguns aspectos importantes, tais como: técnica de preparação dentária; confecção de restaurações provisórias; criação de perfis de emergência adequados; impressões definitivas; ou seja aspectos importantes até à restauração protética final.

**31st March 2022** (20:00 - 21:30 Lithuanian Time)

Topic: „**THE FUTURE OF DENTISTRY: LESS CHIQUE, BUT HIGHLY NEEDED – DENTISTRY IN TIMES OF THE SILVER WAVE**“

Speaker: **Prof. Dr. Falk Schwendicke**, talking LIVE with **Dr. Susanne Effenberger**

**Description:** Our world is aging - and rapidly: both our patients and the dental profession are steadily getting older. On the one hand, this results in shrinking and, above all, spatially uneven dental care offers - highly relevant for young colleagues to have the overview here! On the other hand, treatment needs are also changing - in an aging society, there may be fewer veneers and bleachings to be provided, but more root caries treatment and outreach care.

Together with Dr. Susanne Effenberger, Univ.-Prof. Dr. Falk Schwendicke will highlight these two developments and approach the question of what we as dentists should be able to do in the future and which materials we could use for this.

**12th May 2022** (20:00 - 21:30 Lithuanian Time)

Topic: „**WHITENING & ICON – TREATMENTS AND TECHNIQUES**“

Speaker: **Dr. Linda Greenwall**, talking LIVE with **Dr. Susanne Effenberger**

**Description:** Dentists often find embracing new trends and learning new techniques a challenge, implementing change in practice with the team and patients is a of great concern. In this lecture, Dr Linda Greenwall will combine her knowledge with enthusiasm and passion to provide delegates with strategies to re-energize not only themselves, but their dental teams, overcoming these obstacles and help move practices to the next level.

Together with Dr. Susanne Effenberger, Dr Linda Greenwall provides delegates with the current theories and research surrounding minimal invasive dentistry and white spot management, to enable the successful implementation of strategies which can help provide high quality aesthetic dentistry for patients.
